Habitat: Tropical and subtropical forests
Diet: Carnivore
Conservation status: Least Concern
Lifespan: 4-6 years
Weight: 2-4 grams
Scientific name: Eleutherodactylus coqui

Did you know?

- The Common Coquí lays its eggs on land, and the young emerge as fully formed froglets, bypassing the aquatic tadpole stage entirely.
- Despite its tiny size, the Common Coquí produces a call as loud as 100 decibels. Unlike many other frogs, it skips the tadpole stage and hatches dire…
