CREATURE ATLAS

Animal Fact Sheet

Name: _____ Date: _____

Javan Rhinoceros

Rhinoceros sondaicus

The Javan rhinoceros is among the rarest large animals on Earth. The entire species now lives in a single place — Ujung Kulon National Park, on the western tip of Java — and the population numbers on…

Weight: 900-2,300 kg
Scientific name: Rhinoceros sondaicus

Did you know?

- There are fewer than 80 Javan Rhinoceroses left in the world, all living in a single forest in Indonesia.
- The whole species lives in one park on Java, numbering only a few dozen animals — a single eruption or disease outbreak could end it. Krakatoa is vis…
